

MathLeap

Math Assignments Made Easy

Private Beta QuickStart Guide

What is MathLeap?

MathLeap is an online platform math teachers use to assign their students self-grading assignments. You can easily create assignments that cover the material you're covering in class by choosing topics from our question bank.

Your students work through their problems online with MathLeap's problem editor. We provide a clean and intuitive way for students to show their work. MathLeap analyzes student work to identify steps with mistakes and problems that aren't fully simplified. This helps you and your students focus on misunderstandings.

We believe this technology can make a big difference for teachers and students, and we are so thankful for your participation in its early stages. You have a huge say in the evolution of the software, so don't be afraid to reach out and let us know what you think!

Teachers

Create a class

After you sign up, click the plus sign in the top right-hand corner to create a class. You can name your classes and change their colors.

Invite your students

Next to your class name you'll find a class code. Share the code with your students so they can join your class.

Generate assignments

Clicking on a class brings you to that class' dashboard. Once you're there, you can click on the plus sign to open the assignment builder. Inside of the assignment builder you select topics and question types to create an assignment. You can also configure the assignment deadline and preview it before sharing with your students.

Students

Join your class

After signing up, students can join classes by clicking the plus sign in the upper right-hand corner and entering the class code shared with them by their teachers.

Complete an assignment

Students can click on a class to see the class' assignments. Clicking an assignment will open the problem editor where they can solve problems right in the browser.

Get feedback

Once students submit their assignments, they'll receive instant, line-by-line feedback that helps them learn from their mistakes.

How does MathLeap Help?

Practice

Easily generate practice problems to help your students hone their skills and identify areas for improvement.

Feedback

MathLeap's smart math engine gives line-by-line feedback that helps students learn from their mistakes.

No hassle

Now you can focus on teaching while MathLeap does the grading.

The Beta Program

At MathLeap, we sincerely strive to build products that help teachers teach and students learn. We're inviting select schools to try our software in their classes for free! Our goal is to learn from users how we can make MathLeap as helpful as possible.

The beta version of MathLeap is desktop browser software (no tablet or smartphone support yet!). The current release is targetted toward pre-algebra and algebra 1 classes. We plan on adding support for higher-level classes soon, so stay tuned!

Send feedback and questions to beta@mathleap.org. We'd love to hear about your experiences with MathLeap in the classroom, so please reach out!
